DURALIGHT® BATHTUBS

Modern sculptures
with a multi-sensorial feeling

Teuco Duralight® bathtubs accommodate us and offer a brand new feeling of beauty and solidity: they are a promise of true pleasure achieved thanks to Teuco know-how.

Indeed, this innovative material, resulting from Teuco research and processed using the most modern manufacturing technologies, offers sensations comparable to those of natural surfaces well above those of all other "Solid Surfaces", those new types of materials increasingly popular in the manufacture of bathroom design products.

Contact with a Duralight® bathtub causes perceptions of unexpected pleasure that involves all the senses: first of all sight, owing to the perfect outline and the appearance of modern sculptures, and then touch, due to the pleasant feeling afforded by the smooth continuous surfaces.

DURALIGHT®: unique, because it is patented by Teuco

The characteristics of absolute uniqueness of Duralight® are due solely to Teuco research, always at the cutting edge in the development of innovative and truly different solutions.

Duralight® is a unique composite material, made with

- _ aluminium trihydrate
- _ high quality acrylic resin
- _ additives that make for a compound with special characteristics

Each of these materials making up Duralight® gives the final compound a high profile quality and advantages for its use.

Duralight® is a patented material and is therefore made exclusively by Teuco.

When processing Duralight®, Teuco uses several processes that make it possible to create products of all shapes and sizes.

THE PRECIOUS QUALITIES OF DURALIGHT®

Duralight® offers countless benefits compared with other materials used for bathroom design products so far. It especially appears to be objectively superior to other materials which include polyester in their composition.

This is due mostly to two reasons:

- its original acrylic-based chemical composition;
- Teuco's ability to process it, using various machining processes.

Research combined with know-how are therefore vital for the success of a material with such extraordinary features. These are:

Texture: a multi-sensorial experience

The "silky" texture of Duralight® and its solid appearance, similar to natural stone, offer the gratification of a unique and exclusive product. Sensations that amplify and involve all the senses when you sink into the tub for a regenerating soak. The silky smooth surface, the perfectly continuous lines, the "warmth" conveyed by Duralight® make for a complete wellness experience.

Beauty that stands the test of time

Thanks to its original composition, Duralight® is extremely resistant to exposure to heat and to UV rays. For this reason, it offers a much higher reliability over time than materials containing polyester: no yellowing or colour fading, high resistance to heat and sunlight, easy to clean and repair. Inalterable beauty and colour, year in year out.

Dual resistance

Duralight® is highly resistant to shocks, scratches, abrasions, wear and stresses which are typical in everyday use, especially in the bathroom.

In fact, the solidity of an acrylic-based compound is much higher (almost double) than that of any other polyester-based Solid Surface.

DURALIGHT® BATHTUBS: VERSATILITY TO CUSTOMISE YOUR BATHROOM

Easy to clean

Duralight® is non-porous and cannot be attacked by mould and bacteria. Being a non-porous surface, it also affords the benefit of cutting down dirt and limescale deposits to a minimum. It is also stain-resistant and resistant to the majority of acids. It can be wiped clean with a soft damp cloth and some bathroom cleaners, preferably creams.

The incredible lightness of solidity

Duralight® bathtubs are solid and sound but, thanks to the innovative manufacturing processes, they are surprisingly light too. So for the same material appearance and whatever its thickness, the bathtub is always extremely easy to install and handle.

Design without boundaries

The original composition of Duralight®, combined with Teuco's versatile and innovative processing technologies, opens a new chapter in the manufacture of designer bathtubs, without setting any boundaries to creativity. It is no longer necessary to stop at the rigid square surfaces because total mouldability can be achieved to give shape to any design fantasy.

Duralight® bathtubs can easily blend in with the surrounding setting, creating a continuous whole that is unique and highly personal.

The Feel bathtub in the undermount version can be set according to the designer's creativity and it also offers a range of Teuco finishes to suit your bathroom to a Tee.

View bathtubs can be customised by covering the external surfaces with your chosen material.

Duralight® bathtubs are therefore versatile and can be integrated within larger furnishing solutions, to create bathroom settings and entire wellness areas.
